# **NVMS Management Server**

**User Manual** 

### Notes

There may be several technically incorrect places or printing errors in this manual. The updates will be added into the new version of this manual. The contents of this manual are subject to change without notice.

This manual is suitable for management server. All the pictures used in this manual are for reference only. The management server is mainly used with NVMS. This manual only introduces its system setup. Please refer to the management server chapter in the NVMS user manual for detailed use.

### **1** Installation

#### **1.1 Interfaces and Indicators**

The icons below are for reference only. Please refer to the interfaces and indicators of the real server.

Icon	Description	Icon	Description
$\bigcirc$	Power Key	[ ]	System disk running indicator; flashing light indicators the disk works normally.
//	Reset	->₽́-	Power indicator
∏.¢	USB interface		Network connection indicator. Green light indicators the network connection is normal.

#### **1.2 Rear Panel Instruction**

Name	Description
СОМ	COM connector
IPMI	PMI2.0 connector (management port)
USB2.0/3.0	USB2.0/3.0 interface
LAN1 2	LAN interface
VGA	VGA interface

## 2 Default System Configuration

The default network configurations of the server are as follows:

IP Address: 192.168.0.10

Http Port: 8000

To avoid IP conflict you should configure one at a time as these servers have the same default network configuration.

The default web management page: http://192.168.0.10:8000

The default username is admin and the default password is also 123456.

## **3 Web Client Configuration**

### 3.1 Login

The management server is configured through web browser. It is recommended to use IE9 or above, Firefox 51or lower or Google Chrome44 or lower or Opera35 or lower (Here we take IE browser for example).

Make sure the IP address of the computer is in the same local area network with the management server before accessing the management server, or you will have to modify the IP address of the computer. For instance, change the computer's IP address to 192.168.0.100 and the gateway to 192.168.0.1. Enter http://192.168.0.100:8000 in the IE address bar and then press enter to go to the login interface as shown below.

Enter the username admin and password 123456 and then click "Login" button to go to the main interface.

#### **3.2 Network Configuration**

Click "Network Config" tab to go to the interface as shown below. The IP address, subnet mask and gateway of the server can be set in the interface.

Natural Carfin	
Network Config	
IP Group	Open
IP Address	192.168.0.10
Subnet Mask	255.255.255.0
Gateway	192.168.0.1
Туре	Adaptive Load Balancing 💌
eth0	J Static IP
MAC Address	EC:D6:8A:06:11:CD
eth1(Offline)	✓ Static IP
MAC Address	EC:D6:8A:06:11:CE
Primary DNS	114.114.114
Secondary DNS	8.8.8.8
Commit Res	set

You will get a virtual IP address if the IP group is enabled. As to the access of the virtual IP address, the operation system of the server will judge and transfer the access to eth0 or eth1 automatically. For instance, if you disconnect the network cable of eth1 when testing "ping 192.168.0.10 –t", you will probably get a "Request Timeout" tip if you ping 192.168.0.10; and then you can probably ping it successfully after a few seconds.

#### 3.3 Server Port Configuration

Click "Port Config" tab to go to the interface as shown below.

Management Server		
Port	6003	12 Open
Configuration Server		
Port	7002	🗹 Open
Transfer Server		
Port	6006	🗹 Open
Auto Report Port	2009	
Alarm Server		
Port	6033	🗹 Open
Access Server		
Port	6013	🗹 Open
Intelligent Analysis	Server	
Port	6069	🗟 Open
HTTP Server		
Port	8658	🗹 Open
TV Wall Server		
Port	6036	Ø Open

#### **NVMS Authentication Server User Manual**

Management Server port: the default number is 6003.

Configuration Server Port: the default number is 7002.

Transfer Server Port: the default number is 6006. If this port is enabled, you can set auto report port.

Alarm Server Port: the default number is 6033.

Access Server Port: the default number is 6013.

Intelligent Analysis Server Port: the default number is 6069.

HTTP Server Port: the default number is 8080.

TV Wall Server: the default number is 6036.

Application Server: the default number is 6093. Additionally, you can enable NAT as needed.

The above-mentioned ports can be modified and enabled as needed.

#### 3.4 Change Password

For safety consideration, it's strongly recommended to modify the default administrator's username and password if you access the server for the first time. Click "User Config" tab to go to the interface as shown below. You can modify the username. Please set a strong password.

Edit User	
Current Password New Password	
Confirm Password	ОК

#### **3.5 Basic Information**

Click "System Maintenance"  $\rightarrow$  "Device Basic Information" to view the basic information of the storage server (like product mode, firmware version, software version, etc).

#### 3.6 Date & Time

It is recommended to set date and time first if you set the server for the first time. Click "Date & Time" tab to go to the interface as shown below.

Date And Time	
Time Zone	GMT (Dubin, LIS, London, ⊮▼
System Time	2020-06-16 17:29:52
Synchronous Mode	Manual
Timing Server	time.windows.com
	Apply

Select the time zone according to the region. For example, if you are in London, select GMT. Synchronous Mode: auto or manual can be selected. Please set the system time manually or automatically.

Then click "Apply" to save the settings.

#### 3.7 Upgrade

You can upgrade the server when there is a new software version. Get the upgrade software from you dealer; click "System Maintenance"  $\rightarrow$  "Device Upgrade" to go to the interface as shown blow. Click "Browse" button to select the upgrade file and then click "Upgrade" button to start upgrading.

#### 3.8 Device Reboot

Click System Maintenance  $\rightarrow$  Device Reboot to go to the device reboot interface.

Click "Device Reboot" to reboot the device.

### **4** Specifications

CPU	Intel Core Processor I3
OS	Ubuntu
Memory	4GB DDR4 ECC, Up to 64GB
Network Port	Dual gigabit Ethernet ports
HDD	1 built-in Kingston SSD/SATA /2.5inch
PCI expansion	1*PCI-E3.0*8 (×4); 1*PCI-E3.0*8; 1*PCI-E3.0*16 (×8);
Management	BMC Module; Support IPMI2.0, 1 10/100 Mbps RJ45 management port, KVM, Support remote management
Interfaces	VGA×1, USB × 6 (front panel: USB2.0×2, real panel USB2.0×2; USB3.0×2), network interface × 2; COM × 1, remote management port× 1
Device Access	IPC, DVR, NVR, Decoder, etc.
Max. number of channel management	2048 CH (extensible to 10000CH via transfer server)
Max. number of device access	100NVRs/200IPCs
Max. number of decoder access	128CH
Max. number of transfer server access	32 transfer servers
Max. number of storage server access	32 storage servers
Device Group	Support
Max. number of users	256 users
Simultaneous Online users	64 users
User Permission	Self-define
Real-time view	Up to 100 CH real-time preview; support auto switch

PTZ	Support PTZ control, PTZ permission, PTZ lock, PTZ preset management
Storage type	IP SAN/streaming media storage
Record type	Schedule, manual and alarm records
Record search	Multi-channel synchronous search and playback
Power	100~240V-6~3A/50~60Hz
Power consumption	$\leq$ 300W (with HDD)
Working Environment	Working: 10°C to 35°C; Standby: -40°C~+70°C(ambient)
Relative Humidity	Standby: 95% (non-condensing) under 25°C~30°C
Noise	Working: <50dBA; 6.2BA (<28°C)
Gross weight	Approx. 12KG
Dimension(mm)	$430 \times 487 \times 44 \text{ (W} \times \text{D} \times \text{H)}$
Installation	Standard 19 inch rack mount
